Criteria to identify advanced Learners and slow Learners

Purpose

Identifying slow and advanced learners is crucial in pharmacy education to provide personalized support and opportunities that enhance learning outcomes. It allows for the implementation of tailored teaching strategies, boosts student confidence, and ensures effective resource allocation. By addressing the unique needs of both groups, institutions can foster collaborative learning, reduce dropout rates, and prepare students for successful careers. This approach improves institutional performance, promotes inclusivity, and equips students with essential skills for academic and professional excellence.

Objective

The institute addresses the differentially able students with the following objectives.

1. To provide guidance and support to the slow learner and advanced learner students.
2. To improve the academic performance of the slow learner students.
3. To motivate the advanced learner students and help students in discovering various options for their career and future.
4. To provide student support for skill development

Responsibility

It will be the responsibility of the subject teachers and mentors to monitor the academic performance of these students and provide them additional support in every manner for their overall development. It will be the responsibility of academic committee to identify and prepare the list of advanced and slow learners at the start of academic year through the process of mentoring with the help of mentors, subject teachers and class teachers.

Guidelines for advanced learners and slow learners

1. Each subject teacher is expected to identify the slow learners and advanced learners of the class from the performance of students in assignments or previous University examination. The list of slow and advanced learners shall be submitted to the academic section.
2. During regular classroom teaching and lab sessions special attention should be given to these students.
3. If required, separate coaching can be provided to the slow learners wherein their difficulties shall be solved, course material shall be provided and the assignments should be given to these students.
4. The extra coaching may also include, teaching few difficult topics in the curriculum using charts, models, presentations, videos or actual case studies, assignments given to students such as presentations, reading and preparation of topics, solving numerical and question banks.
5. It is the responsibility of the subject teacher to provide all possible help and support to the students.
6. The academic performance of the slow and advanced learners shall be monitored by every subject teacher throughout the semester.
7. A report on the academic progress of advanced and slow learner shall be submitted to academic section at the end of each semester by every subject teacher.

FORMULATION AND EVALUATION OF DXTROMETHORPHAN LOADED POLYMERIC MICELLAR ORAL DISPERSIBLE TABLETS

P. Kavya¹, Pavankumar krosuri^{*}

Abstract

Dextromethorphan is a potent anti-tussive agent having low bio availability of 11%. The present research investigation was to prepare Polymeric micelles containing Dextromethorphan, nanotechnology-based drug delivery systems that enhance the solubility using different grades of Pluronic's F-68, F-188, F-407 respectively by solvent evaporation method. The Polymeric micelles so prepared were characterized for its particle size, Zeta potential, PDI, TEM analysis, Drug loading efficiency. Among various formulations PM9 showed greater drug loading efficiency i.e 90% and particle size of 50nm that will be further formulated into Oral Dispersible tablets using different super disintegrants like SSG, Cross povidone, Low- HPC, among various formulations F9 showed less disintegration time of 10 sec and maximum drug release of 98.89%. from the kinetic observations of optimized formulation F9, R² of release data based on best curve-fitting method for selected ODT the drug release showed First order kinetics i.e R²= 0.869 indicating that the drug release depends upon its concentration.

KEYWORDS

Lacidipine, nanoparticles, lyophilization, Solvent-Antisolvent precipitation method.

ABSTRACT:

Introduction: Hypertension is the main cause of Heart Diseases. As per world Statistics Heart Diseases are increasing year by Year. The Drug used in the present Research investigation is Lacidipine which is a Dihydropyridine calcium channel blocker that is used in the treatment of hypertension and angina pectoris.

Objectives: Lacidipine Loaded Nanoparticles were prepared by using Solvent-Antisolvent precipitation method to improve its solubility. The Nanosized Nanoparticles were prepared into Oral Disintegrating tablets by using suitable Super Disintegrants.

Method: The nanoparticles were created using Solvent-Antisolvent precipitation method, which used Anisole and N-Methyl 2 pyrrolidone as solvents and water as an antisolvent in various ratios of 1:1, 1:2, and 1:3, with Pluronic F 407 and Cremophore as stabilizers. The Nano suspension obtained through this method was Lyophilized. The Lyophilized powder was blended and Precompression parameters are applied, followed by the preparation of oral disintegrating tablets using Superdisintegrants such as sodium starch glycollate, cross carmellose sodium, and cross povidone via the Direct Compression method.

Results: All prepared oral disintegrating tablets had post compression parameters tested. According to the official limits, all of the formulations demonstrated the desired physicochemical properties. Within 30 minutes, drug release studies were performed on all formulations using a USP II paddle type apparatus and a pH 6.8 phosphate buffer. F9 had the highest drug release rate of any formulation (98.89%). F9 and marketed formulation drug release studies were carried out. F9 demonstrated 98.89% drug release versus 83.35% for the marketed formulation. Kinetic studies for the drug release mechanism were carried out on the optimized formulation F9. The release kinetics of the Optimized formulation F9 revealed that the formulation followed first order kinetics, with $R^2 = 0.869$ indicating that drug release is concentration dependent.

Conclusion: Nanoparticles were prepared successfully by Solvent-Antisolvent precipitation method and Optimized Formulation was made into Oral Disintegrating Tablets to increase Solubility of the Formulation and expected Increase in the therapeutic efficacy of the poorly soluble Drug.

ABSTRACT

Background: The current study aims to evaluate prevalence of Obese-diabetics, Diabetes Mellitus risk factors and complications by assessing prescription and lifestyle modifications along with the SF-36 questionnaire, which measures Quality of Life. **Materials and Methods:** This study was a cross-sectional observational study. Patients are selected and categorized based on their Body Mass Index score and questioned about Diabetes Mellitus risk factors and complications. Patients' Quality of Life is assessed using the SF-36 questionnaire, which contains eight specific sub-domains, and one additional item (Health change status). A Higher SF-36 score indicates better functioning and suggests the best Quality of Life of patients.

Results: The prevalence of Obese-diabetic patients is 136(56.43%). The risk factors of Diabetes Mellitus are observed, which shows individual Prevalence for factors like Alcohol 60(24.9%), Smoking 57(23.65%), Low physical activity 193(80.08%), Blood pressure 74(30.71%), and Age 194(80.5%). The complication of Diabetes Mellitus was observed which shows individual Prevalence for Cardiovascular Diseases 23(9.54%), Nephropathy 23(9.54%), Retinopathy 111(46.06%), and Limb Amputation 4(1.66%). Quality of Life of patients is significantly associated with physical functioning, emotional problems, energy, pain, and social functioning. **Conclusion:** Quality of Life is significantly associated with Gender, Education, Occupation and dietary habits of obese-diabetic people. Clinical pharmacist intervention assistance is required to improve the quality of life of Obese-diabetic patients to reduce further
